5 **Supplementary Table 2. Range of parameters used for calculating the range of applicability of**
 6 **the growth models.**

| | <i>Picea abies</i> | | <i>Pinus sylvestris</i> | | units |
|----------------------------|--------------------|------|-------------------------|------|----------|
| | min | max | min | max | |
| Altitude | 1 | 2300 | 1 | 2000 | m a.s.l. |
| Annual Precipitation | 290 | 3400 | 208 | 3100 | mm |
| Precipitation winter | 30 | 1039 | 19 | 1132 | mm |
| Precipitation spring | 31 | 835 | 22 | 983 | mm |
| Precipitation summer | 39 | 1063 | 3 | 832 | mm |
| Precipitation autumn | 40 | 1291 | 28 | 984 | mm |
| Annual maximum temperature | -0.6 | 16.5 | -0.6 | 20.5 | °C |
| Maximum temperature winter | -16.7 | 9 | -16.7 | 14.7 | °C |
| Maximum temperature spring | -2.2 | 17 | -2.8 | 20.6 | °C |
| Maximum temperature summer | 9.1 | 27.3 | 8.4 | 31 | °C |
| Maximum temperature autumn | -1.6 | 17.4 | -1.7 | 21.8 | °C |

7

8

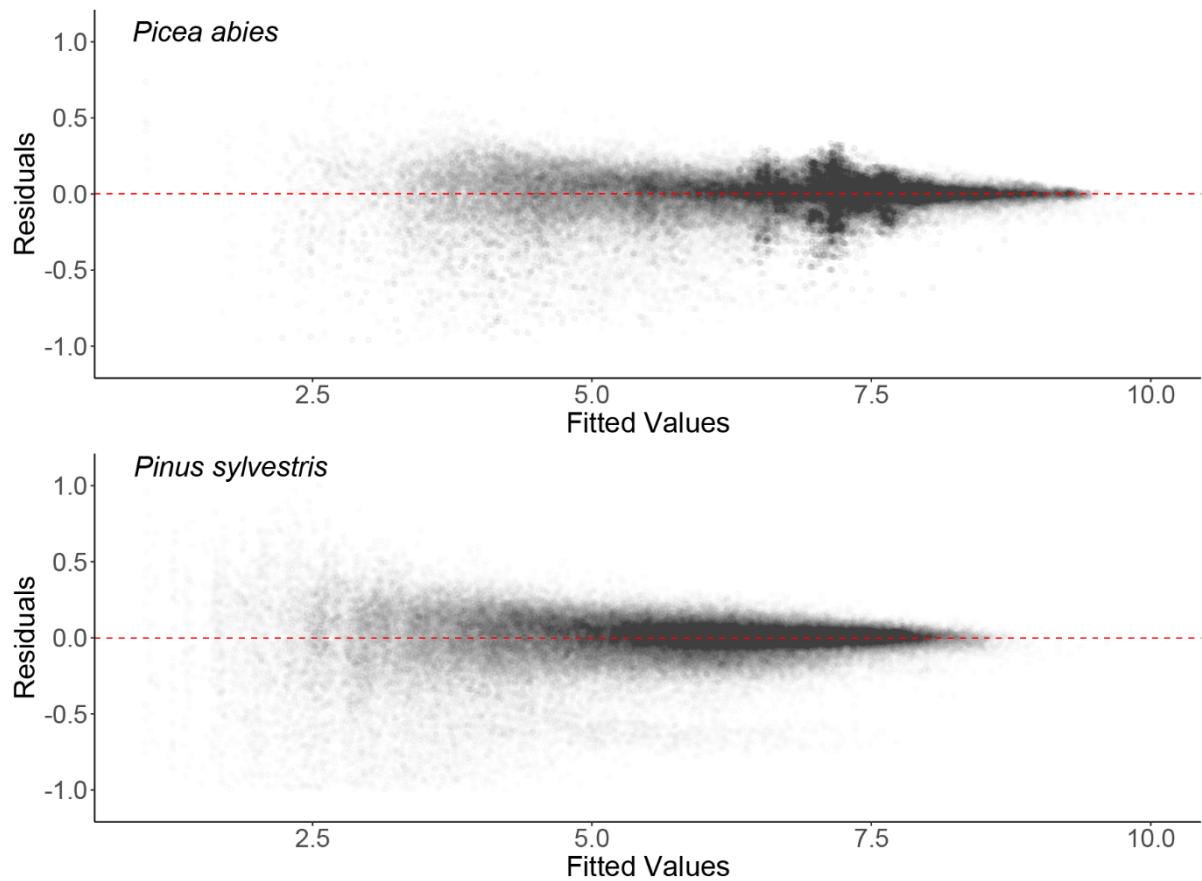

9 **Supplementary Figure 1.** Model performance fit to data and correlation coefficients between
10 observed versus predicted growth values.

11

12

13 **Supplementary Figure 2.** Model's residuals distribution across fitted values.

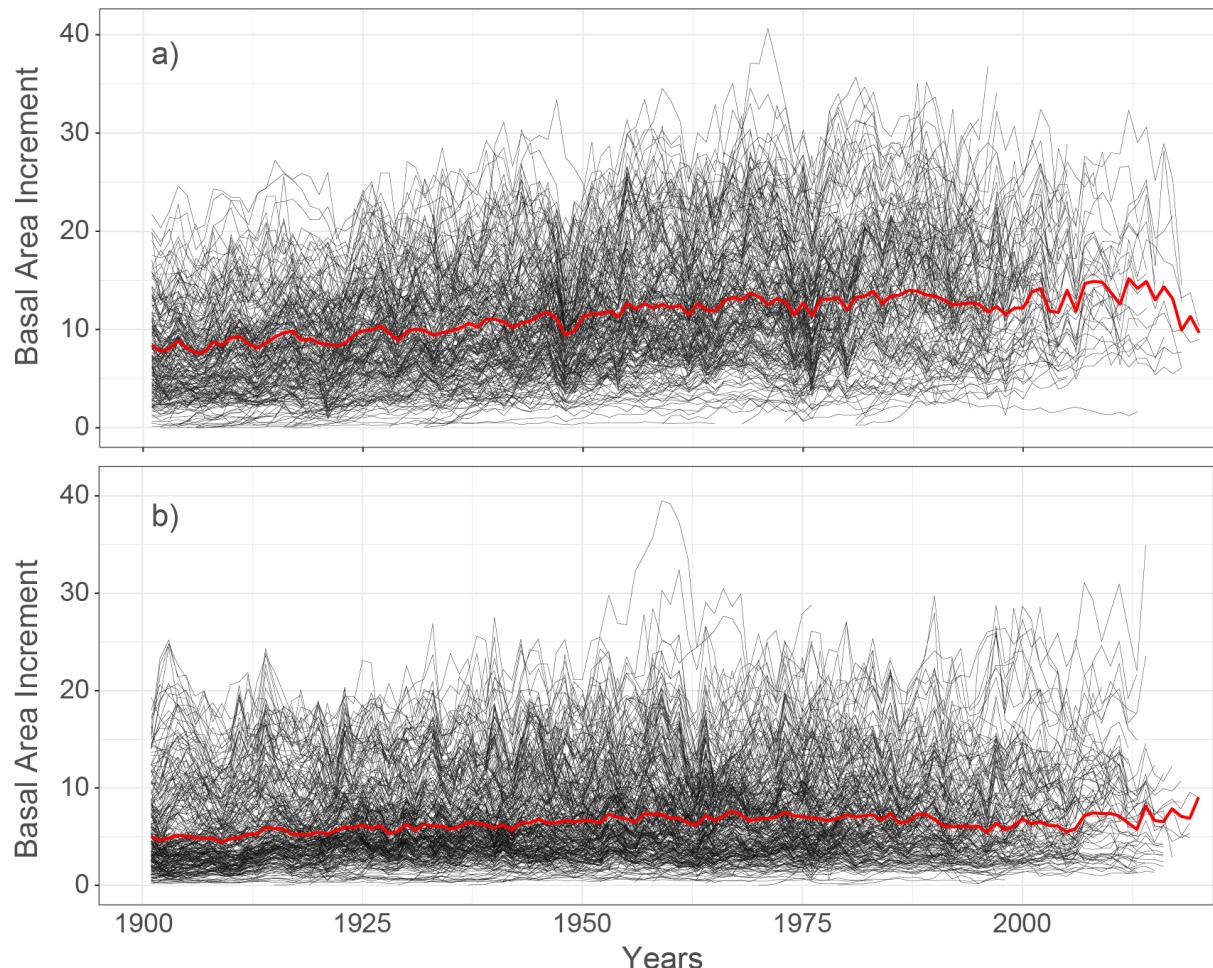

14

15

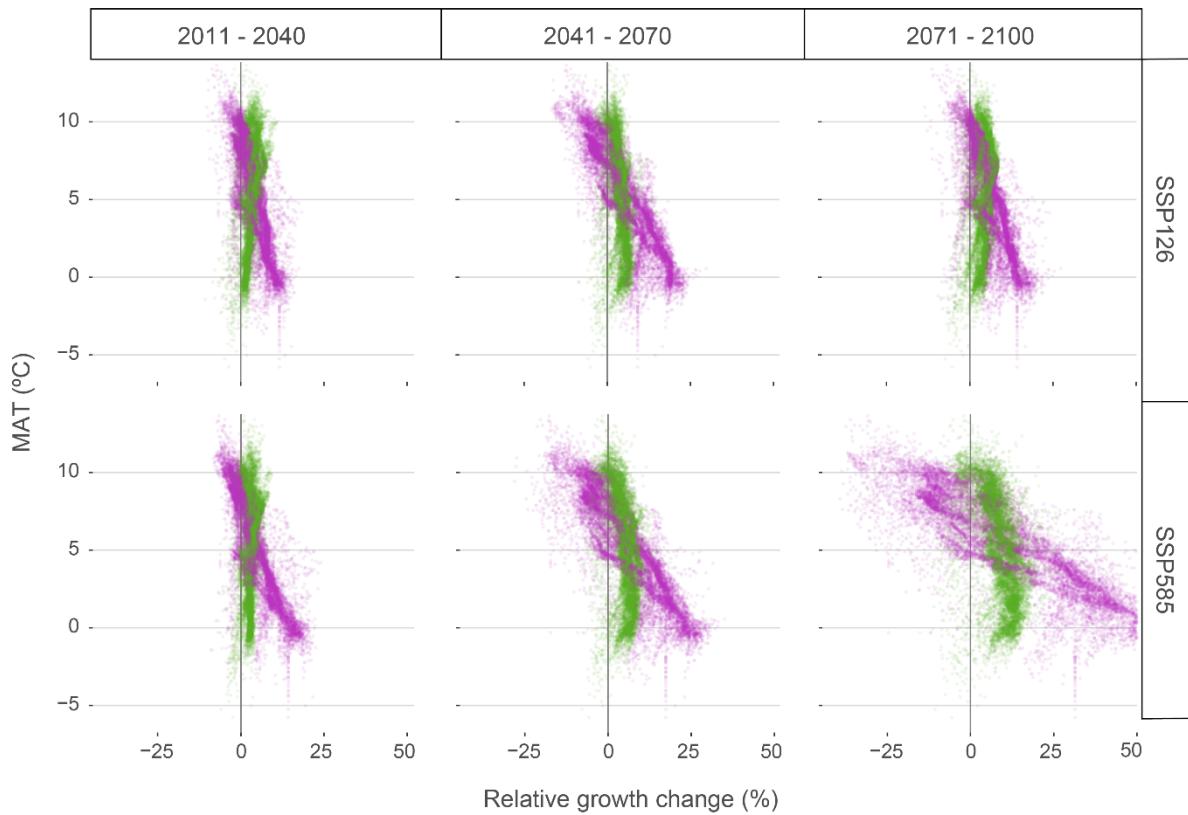

16

17 **Supplementary Figure 3.** Mean Basal Area Increment chronologies of the 223 *Picea abies* (a) and the
18 272 *Pinus sylvestris* (b) sites from 1900 (grey lines). The thick red line indicates the species' mean
19 Basal Area Increment.

20

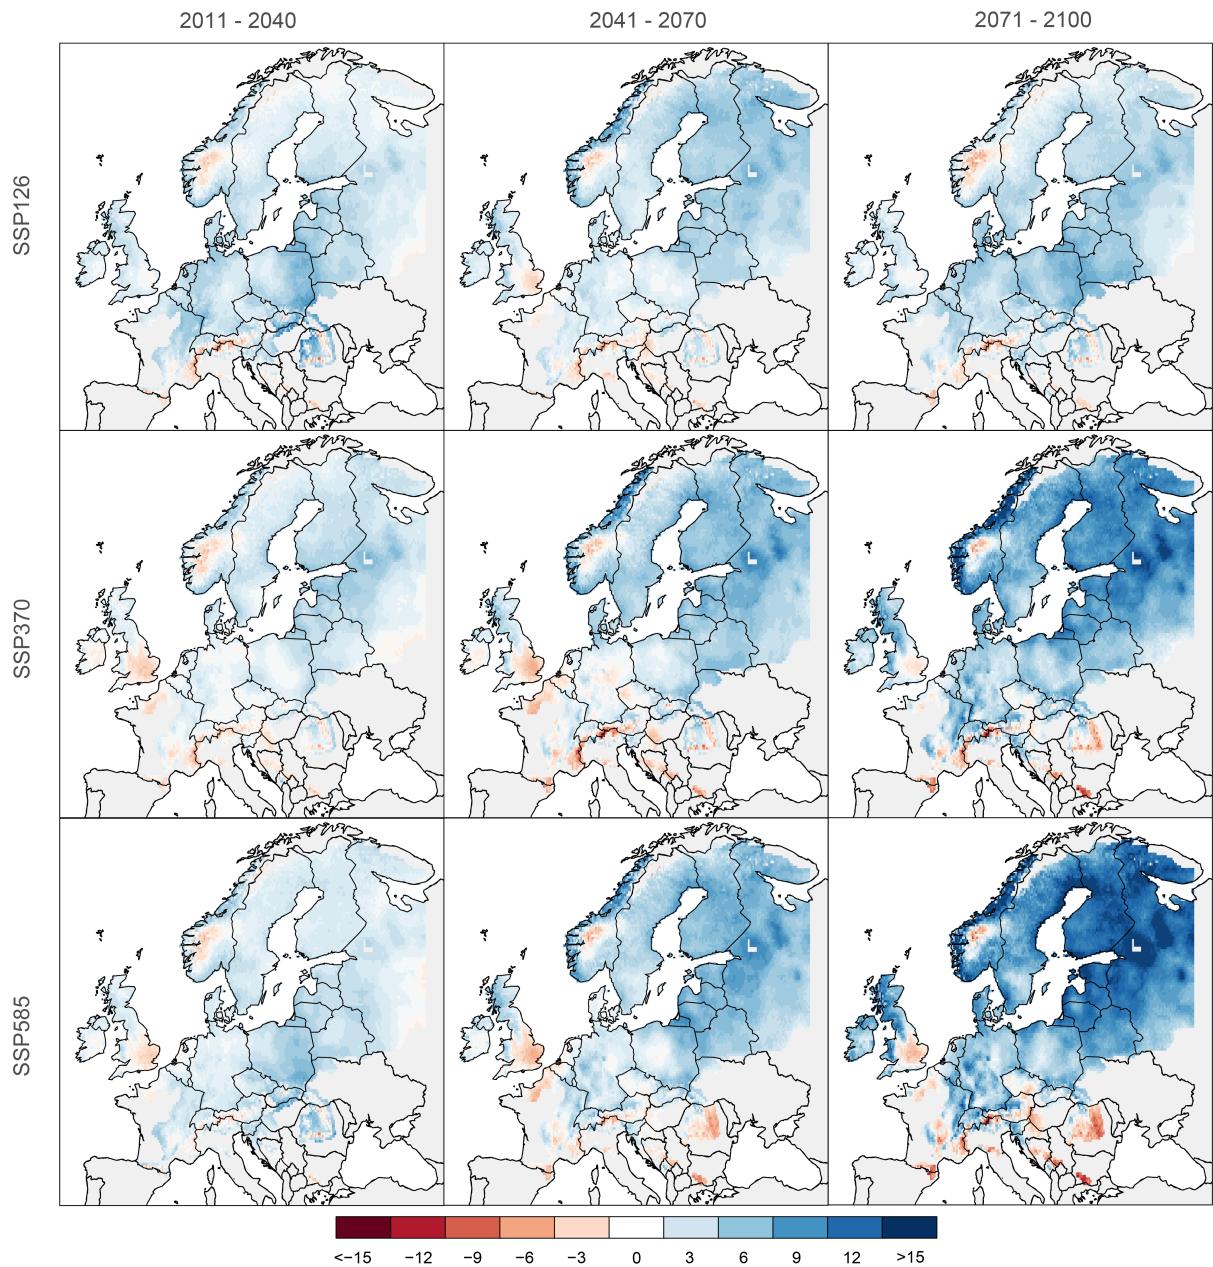

21 **Supplementary Figure 4.** Projected growth changes of *Picea abies* (green) and *Pinus sylvestris*
22 (purple) growth along Mean Annual Temperature (MAT) gradients. Changes are expressed as relative
23 differences of Basal Area Increment (in %) considering the CMIP6 scenarios SSP126, and SSP585 for
24 the periods 2011-2040, 2041-2070, and 2071-2100 relative to the 1986–2016 mean.

25

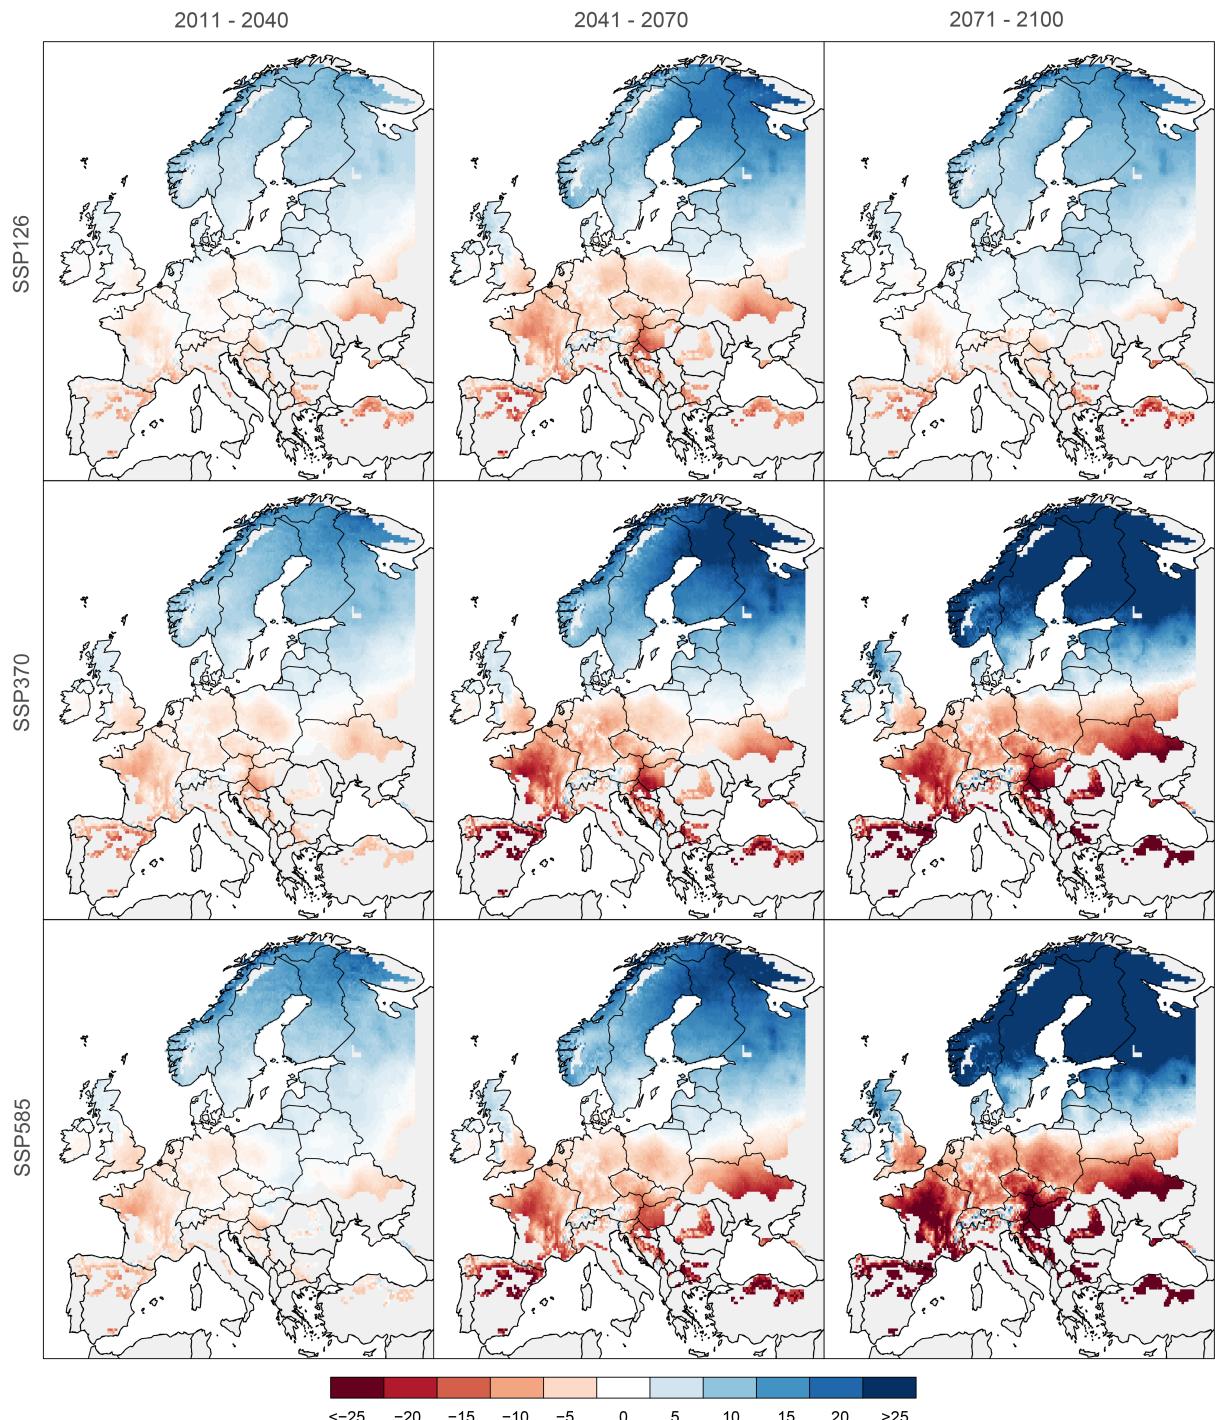

26

27 **Supplementary Figure 5.** Relative changes in tree growth of *Picea abies*, projected under CMIP6
28 scenarios SSP126, SSP370, and SSP585, for the periods 2011-2040, 2041-2070, and 2071-2100. The
29 changes are expressed in percent BAI change relative to the 1986–2016 period mean.

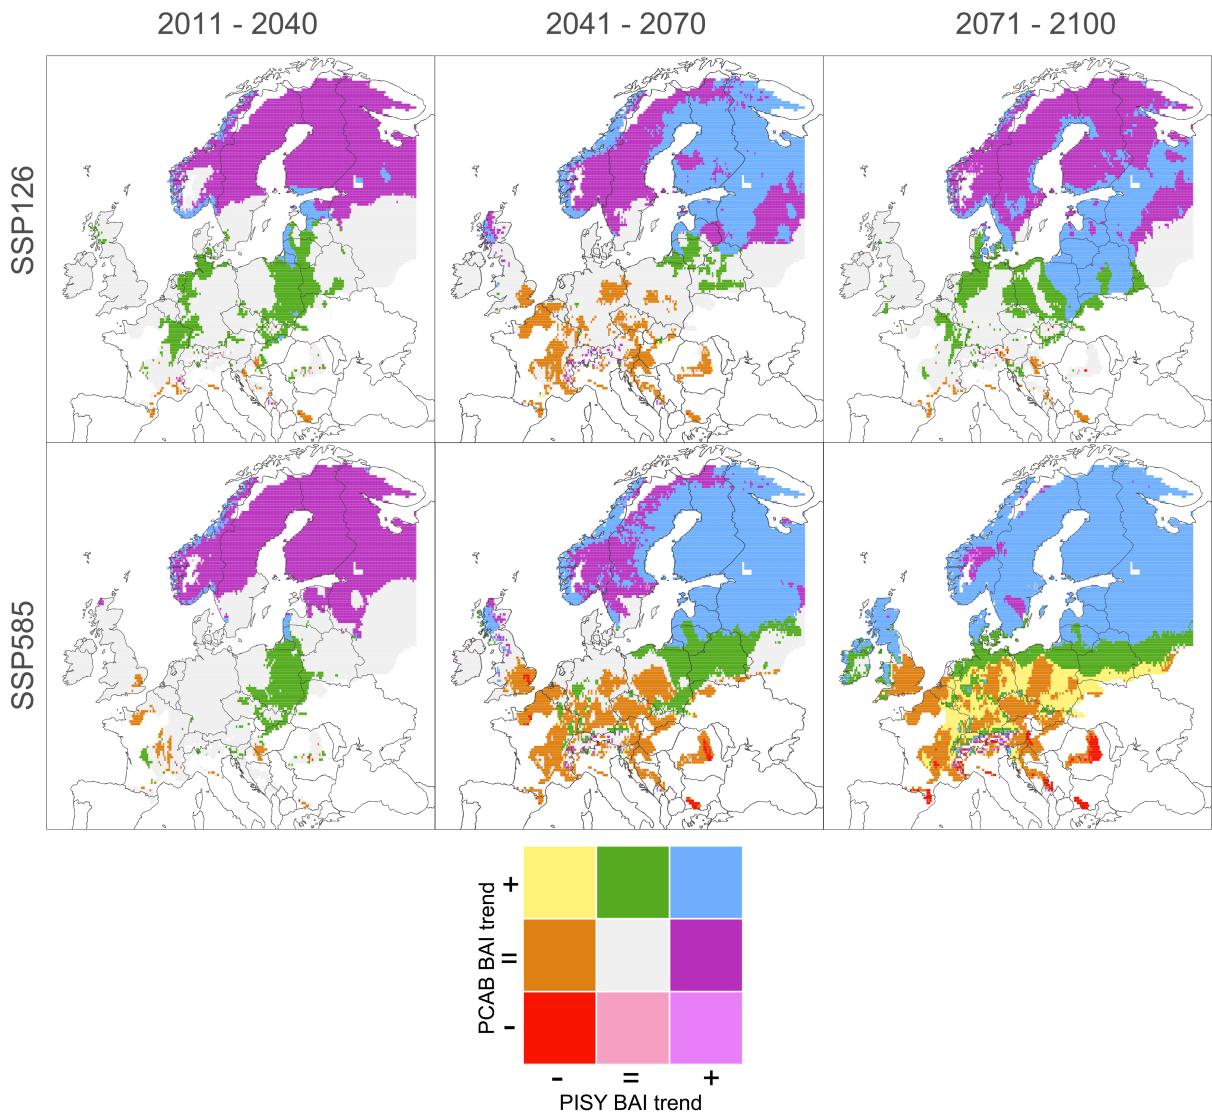

30

31 **Supplementary Figure 6.** Relative changes in tree growth of *Pinus sylvestris*, projected under CMIP6
32 scenarios SSP126, SSP370, and SSP585, for the periods 2011-2040, 2041-2070, and 2071-2100. The
33 changes are expressed in percent BAI change relative to the 1986–2016 period mean

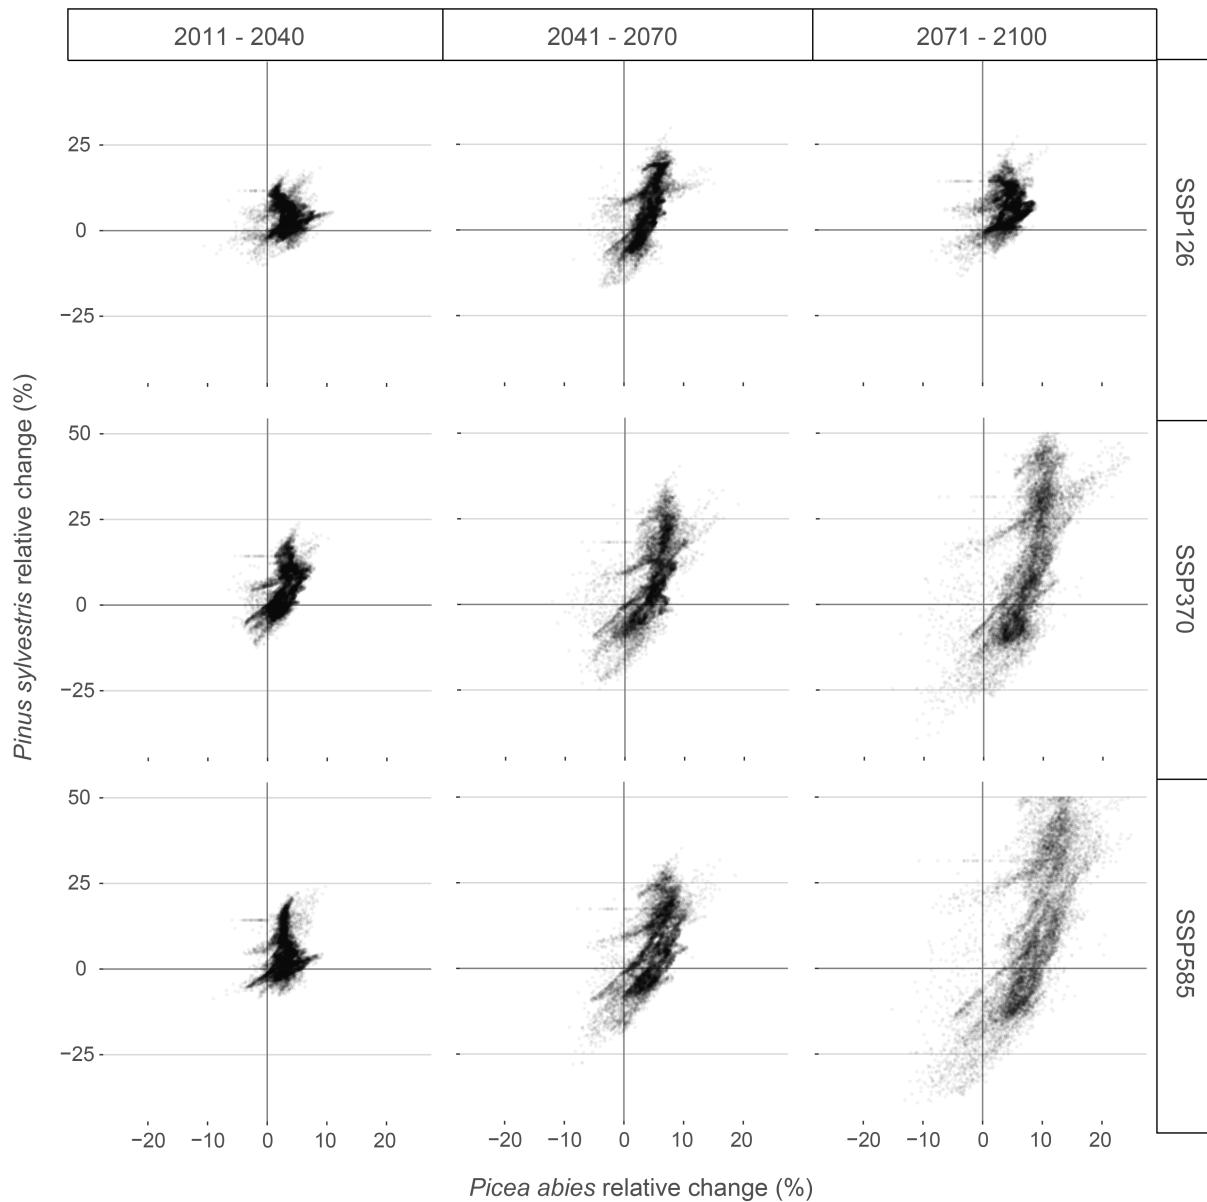

35 **Supplementary Figure 7.** Combined growth trends projections at shared *Picea abies* and *Pinus*
36 *sylvestris* distribution across Europe. Colors represent combinations of Basal Area Increment (BAI)
37 trends (positive +, neutral =, negative -; see Methods), projected under CMIP6 scenarios SSP1-2.6 and
38 SSP5-8.5, over the periods 2011-2040 (a), 2041-2070 (b), and 2071-2100 (c) relative to the 1986-2016
39 mean.

40

41

42 **Supplementary Figure 8.** Comparative growth changes of *Picea abies* and *Pinus sylvestris* across the
43 shared species distribution, expressed in percentage. Different panels refer to the CMIP6 scenarios
44 SSP126, SSP370, and SSP585, for the periods 2011-2040, 2041-2070, and 2071-2100.

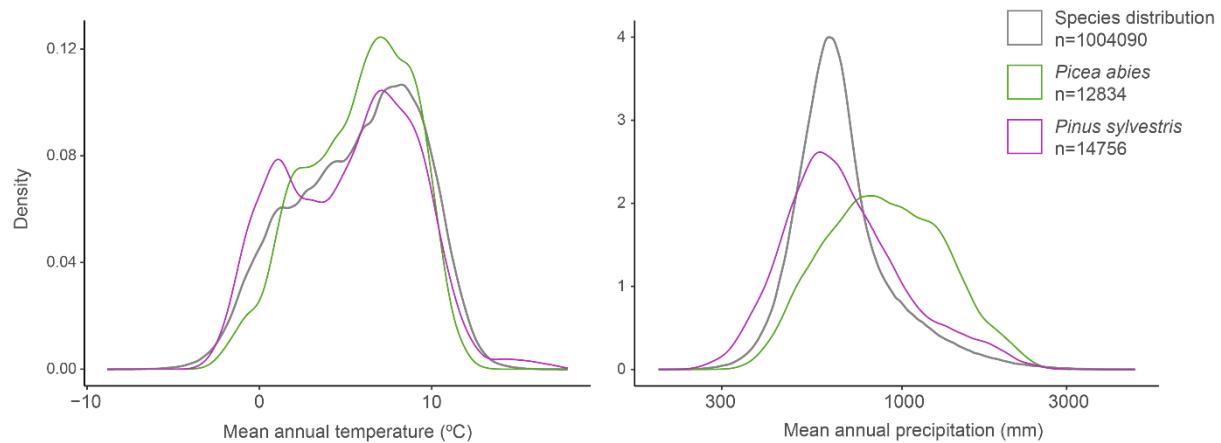

45

46

47 **Supplementary Figure 9.** Density curves representing the range and frequency of mean annual
48 temperature and mean annual precipitation of the study sites (chronologies) compared with the shared
49 distribution of both species. The number represents the combination of number of observations (sites
50 per species, pixels for the species distribution) multiplied by the number of years included in the
51 analysis (1955-2016).

52
